AB The agents contain (a) condensates of dicyandiamide (I) and polyalkylene-polyamines and (b) cationic surfactants, which are sprayed on parts contacted to raw materials of pulp or paper in papermaking app. to avoid pitch from sticking on the parts. Thus, an agent contg. 1:1.5 mixt. of 1:1 I-diethylenetriamine copolymer and lauryldimethylbenzylammonium chloride was sprayed on a part (including felt) of a papermaking app. the n pulp slurry was subjected to the app. There was no pitch adhesion on the

felt part so that to save washing of the app.
